CHICAGO 7, ILL.

31 WEST 27TH ST.  
NEW YORK 1, N.Y.

A House of Stock Plants for A.B.C. Cuttings.

The popularity of the Chrysanthemum has made it a universally grown crop and it is very essential that all growers start with cultured healthy cuttings. These are the kind you will find in the pages listed in this catalog.

## WHAT CAUSES PREMATURE BUDDING OF CHRYSANTHEMUM CUTTINGS DURING THE SPRING MONTHS, AND WHAT TO DO TO PREVENT IT\*

Bud initiation can occur any time during the spring months, whenever your temperatures in the greenhouses are consistently 60 degrees Fahrenheit or above, and the days are short enough to initiate bud setting. These conditions can occur any time up until May 1st depending upon the variety and the locality in which they are being grown. Some varieties such as the garden varieties and early shading varieties require very little short day treatment, coupled with high temperatures to initiate buds. This same tendency to set bud readily is what makes these varieties desirable for early shading and garden work.

In order to prevent this premature setting of buds, these same varieties should be placed where they can be given additional light during the early spring months. Use 60 watt bulbs spaced 4 feet apart and 30 inches above the plants. Use the lights for a period of two hours each night after dark up until May 1st, then discontinue lighting.

A.B.C. Mum cuttings are packed in specially designed cartons and rushed to you by express to insure their reaching you in perfect conditions.

## TERMS OF SALE

1. The minimum total order that can be accepted is 500 cuttings.
2. Fifty of each variety is the minimum that can be supplied.
3. More than 50 of a variety must be in multiples of 50.
4. No C.O.D. orders. Prices subject to change without notice.
5. **SAFE ARRIVAL** cannot be guaranteed. All shipments must be in satisfactory condition before being accepted by the common carrier. Our responsibility ceases upon receipt of shipment by their agent. If shipment arrives in bad order, i.e., broken, frozen or heated, call your express agent, have him inspect shipment and mark condition on the express receipt. Customer must file claim against the common carrier.

**SUBSTITUTIONS**—Our growers will substitute equal or better varieties for items not available unless order is marked **NO SUBSTITUTIONS!** To avoid substitutions, place your order 6 months before delivery date.

**CHANGES OR CANCELLATIONS** on orders must be received at least 30 days before shipping date!

**DISCOUNTS**—2% for cash with an order for plants or rooted cuttings.

**AIR SHIPMENTS**—If you live in or near a city with air service, check the rates. In many cases you will find them almost as cheap as railway express rates and delays in transit will be avoided.

We, the American Bulb Company, act as agents for the growers, and we do not warrant in any way, expressed or implied, the description, quality, productiveness or any other matter of any cuttings or plants sold by us. We, further, will in no way be responsible for failure to deliver on dates requested if the customer does not accept the goods on above terms he must return them at once, and money will be refunded or proper credit given. We exercise, however, the greatest care to fill our orders with the highest quality possible, as it is our constant aim to give our customers fullest satisfaction.

All goods are offered subject to crop failures, shortages or other causes beyond our control and to being unsold on receipt of order and we reserve the right to advance prices without notice.

# The Culture of Chrysanthemums, Any Season

SOURCE: OHIO STATE FLORISTS BULLETIN

Since publication, in the September, 1950 Bulletin, of the year around flowering program of chrysanthemums, the introduction of new varieties and refinements of culture necessitate the revision which we are presenting now.

## CUT FLOWERS

The schedule of operations is that of Yoder Bros., adapted for the 40° to 45° north latitude (New England, New York, Pennsylvania, north half of Ohio, north half of Indiana, north half of Illinois, Iowa, Minnesota, Wisconsin, Michigan, Washington, and Oregon). For the latitude of 35° to 40° north (southern New Jersey, Delaware, Maryland, Virginia, West Virginia, North Carolina, Kentucky, Tennessee, Southern Ohio, southern Indiana, southern Illinois, Missouri, Kansas, Colorado, northern Arkansas, northern Oklahoma, southern Nevada, southern Utah, and central California) a slight modification of the schedule should be made between the dates of July 21 and March 3 only. This modification consists of cutting off one week of long day treatment or, to state in another way, give short day conditions one week earlier than is shown in the schedule presented here. For more southern latitudes, other schedules should be consulted.

Even though you may not be interested in chrysanthemums at all seasons, there is considerable interest in the flowering of the mum for specific periods. For example, the production of white, yellow, and light pink pompons for the spring months has been very profitable for some growers. The schedule can also be used for production of standard mums when natural varieties are mediocre or poor. This is well illustrated in December, when Smith's Late White and Tobin's Late Yellow may be the only varieties available. In this case it is quite simple to delay the flowering of the Indianapolis group, the Mefos, or the Queens for December to have good quality standards for this period.

## CUTTINGS

The cuttings must be taken from lighted stock plants, and it is simplest to buy them from the specialist who is doing it.

## LIGHTING

To prevent formation of flower buds the light intensity must be 10 foot-candles (F.C.). For an extensive area, additional light is best supplied by bulbs near the roof of the greenhouse and you should consult your local light and power company concerning the cheapest method of providing the desired intensity. For smaller installations the spacing given below will be satisfactory for a bench 4 feet wide:

60-watt bulbs in a reflector, spaced 4 feet apart, 2 to 4 feet above the tops of the plants.

100-watt bulbs in a reflector, spaced 6 feet apart, 2 to 4 feet above the tops of the plants.

200-watt bulbs in a reflector, spaced 8 feet apart, 2 to 4 feet above the tops of the plants.

Lights must be used between August 1 and May 15 because during this period the day length is short enough to cause flower buds to form on some of the varieties.

Results of work by experiment stations and commercial firms show that best results with lights are secured by interrupting the night. Actually, the chrysanthemum is a "long night" plant rather than a "short day" plant. This may appear to be splitting hairs, but flower buds can be prevented from forming by interrupting the night even though at the same time the day length is short. Therefore, begin lighting at 10 p.m. for the number of hours shown below:

Month	Hours of lighting per night
August	2
September	2½
October	3
November	4
December	5
January	5
February	4
March	3
April	2
May 1-15	2

Though manipulation of light to control spray formation is feasible, it is too complicated for the grower who is not a mum specialist.

## SHADING

Between September 1 and February 15 the day length is short enough to cause flower buds to form on all varieties. Therefore it is not necessary to cover the plants with black cloth during this period. However, if you have a number of houses or benches in mums and the lights are not all turned off the same day, then you must use black cloth as a curtain between lighted and unlighted benches.

## TEMPERATURE

To insure rapid vegetative growth as well as flower bud set, the night temperature must be 60° F. There are only a few crops that can be grown with chrysanthemums at the 60° F. night temperature during the fall, winter, and early spring months. Chrysanthemums can be grown with roses, gardenias, and China asters. However, stocks, snapdragons, and other cool crops cannot be grown with chrysanthemums. Flowers of extra fine quality can be produced by gradually lowering the night temperature to 50° F. after the flower buds are visible. This requires more time than shown in the schedule and cannot be practiced where chrysanthemums in various stages of development are being grown in the same house.

In hot summer weather, black cloth shade should be applied late in the afternoon and removed later in the morning—this will reduce the heat under cloth. Some varieties will not develop properly if it is too warm

# A.B.C. Supreme Quality Rooted Cuttings

under the cloth, while pink and bronze varieties fade at high temperatures. The best bronze pompons to withstand summer heat are Beauregard, Buckskin, Dark Bronze Masterpiece, Firefly, and Paragon.

## GENERAL RECOMMENDATIONS

The schedule of operations allows for three crops per year from the same square foot of bench space—if you are interested in year around flowering. If not, then use the schedule to flower the chrysanthemums wherever you want them.

Yoders do not pinch the cuttings. Since the market demands are for bunches with at least 6 stems, the planting distance varies with the season; that is, the more natural light there is the closer the planting. The recommended spacing is shown below:

Distance in inches	When plants are to be flowered from
4x6	June 15 to September 15
4x7	September 15 to November 1
4x8	November 1 to December 15
4x9	December 15 to March 15
4x8	March 15 to May 1
4x7	May 1 to June 15

Both pompons and standards are supported with wire and string, the same as pompons usually are. To get the best and most rapid growth, (1) be sure the soil is well drained, (2) keep the nitrate level no higher than 25 ppm (Spurway) in late fall and winter, and (3) keep the Solubridge (soluble salts) readings low.

Disbudding practices vary with the grower—some do, and some don't. Disbudding requires time, but with all except the button types (Pinocchio, etc.) the size of the flower and spray formation can usually be improved.

For color preference at various periods of the year, consult your selling outlet. Market preferences vary too much for specific recommendations.

Yoder's schedule of operations is based on weather conditions for northern Ohio. In the south where the sunlight is brighter, the plants will grow more rapidly and some adjustments may have to be made.

Failure of the plants to flower when given short days is usually due to allowing too many long days. Encore, Moonglow, Golden Chord, Majorette, and a few others are especially troublesome in this respect.

## VARIETIES

You will note that varieties have been classified into groups, depending upon the approximate number of weeks required for them to come into flower from the time they are given short day treatment. Those that naturally flower early are in the 7 or 8 week groups; those flowering somewhat later are in the 10-week group, etc.

Some of the pink, bronze, and red varieties will fade badly at high temperatures. In these colors, the varieties proving the most satisfactory in warm weather are Beauregard, Buckskin, Dark Bronze Masterpiece, Memorial, Pandora, Paragon, Pink Dot, Red Seneca, Reward, Rubicon, and Taffeta.

The varieties listed below are recommended for out-of-season production:

## White Pompons, Decoratives, Singles, and Anemones

Variety	Recommended for flowering
<b>7-week varieties</b>

## POTTED PLANTS

The general rules pertaining to the use of lighted cuttings, lighting, shading, and temperature apply to chrysanthemums grown as pot plants as stated for cut flowers. However, the pinching date and the varieties used are much different. To keep the plants low, compact, and shapely, they must be pinched soon after they are potted.

**Single pinch system.** Some growers prefer to produce plants that are pinched only once, because it is a quick method of production. At least 3 or 4 cuttings should be placed in a 5-inch pot or 4 or 5 cuttings in a 6-inch pot. Azalea pots are suggested rather than standards because they are lower and give better effect to the finished plant. If potted during the spring, summer, and fall months, best results are secured with most varieties by pinching and shading the plants the same day that they are potted. This is often referred to as the pot, pinch, and short day system of production. During the winter months, however, it has been observed that the plants should be allowed to grow for 7 to 10 days before they are pinched and given short days.

**Double pinch system.** Larger, more showy plants are obtained by pinching twice. Three rooted cuttings should be placed in a 5- or 6-inch azalea pot. If potted during the spring, summer, and early fall months, the cuttings should be pinched the same day they are potted and then pinched again in 3 to 4 weeks depending upon the rapidity of growth. With most varieties, the plants should be given short day conditions the same day as the date of the second pinch. In the winter months better results are obtained if the cuttings are allowed to grow 7 or 10 days before they are pinched the first time, and, the second pinch should be made 3 or 4 weeks later.

**Varieties.** The number of good varieties for use as pot plants is rather limited. While it is true that any variety may be pot grown, it is usually the larger flowered types that find quick public acceptance.

## WHITE

**Christina** - early.

**Granite State** - short compact growth; often necessitates more cuttings per pot or use of smaller pots.

**Indianapolis White** - usually too tall unless pinched 10 days after short days are started.

**Little America** - must be disbudded for best results.

**Queen's Lace** - a good novelty, but will be too tall unless pinched 10 days after short days are started.

**Richard Mandel** - formerly the most popular white.

**Silversmith** - though a seedling of Revelation, it is not too tall if pinched 10 to 14 days after short days are started; must be disbudded. Recommended for December through March only.

**White Frick** - usually too tall unless pinched 10 days after short days are started.

**Wilson's White** - a new one that is worthy of trial.

## YELLOW

**Blazing Gold** - early, but somewhat soft.

**Bonnafon Deluxe** - the best pot mum, bar none. Sometimes uneven or blind in winter.

**Butterball**

**Dark Indianapolis Yellow** - a sport which is short.

**Golden Glory** - may be soft.

**Gold Lode** - very soft, but early.

**Indianapolis Yellow** - usually too tall unless pinched 10 days after short days are started.

**Sunglow** - may be soft.

**Yellow Lace** - an excellent novelty, but will be too tall unless pinched 10 days after short days are started.

### BRONZE AND RED

**Apricot Queen** - if overwatered, this variety quickly becomes chlorotic.

**Bronze Masterpiece** - somewhat soft, and must be disbudded. If too tall, pinch 7 to 10 days after short days are started.

**Copperhead** - usually too tall unless pinched 10 days after short days are started.

**Glitters** - if overwatered, this variety quickly becomes chlorotic.

**Gypsy** - must be disbudded; fades in hot weather.

**Indianapolis Bronze** - usually too tall unless pinched 10 days after short days are started.

**Indianapolis Golden Bronze** - a quilled sport which is short.

**Ivanhoe**

**Mrs. Stahelin** - may be tall.

### PINK

**Helen Frick** - usually too tall unless pinched 10 days after short days are started.

**Indianapolis Pink** - usually too tall unless pinched 10 days after short days are started.

**Masterpiece** - somewhat soft and must be disbudded. If too tall, pinch 7 to 10 days after short days are started.

**Queen of Pinks** - the most popular pink pot mum; fades badly in hot weather.

**General Remarks.** The best pot mums are produced by placing three rooted cuttings in the finishing pot. If hard, starved plants out of small pots are used, poor specimens should be expected. If the pinches are made too high, the plant will not only be leggy, but require extra care in staking.

Regular applications of fertilizer should be made to keep the foliage green and the plant in a healthy condition. It is no longer necessary to run the plants extremely dry and starve them to obtain compact specimens—proper pinching takes care of this. Foliar nematode and septoria black spot can cause the loss of lower leaves which makes the plants unsightly.

A pot mum that is too tall and leggy or one devoid of lower foliage is the main reason why one hears the remark "pot mums won't sell." Height can be kept in check by pinching 7 to 10 days after short days are started. With some varieties it may be necessary to

pinch as late as 14 days after short days are started. It is remarkable how the variation of pinch date in relation to the start of short days regulates the height and compactness of the plant.

While any variety may be grown as a pot mum, most pompons and standards become tall and leggy, are too soft, or do not produce an eye-catching display of flowers.

Only one flower should be allowed to develop per stem. All other buds should be removed when they are large enough to handle conveniently.

### Hardy varieties as spring flowering pot plants.

A number of hardy or garden chrysanthemums can be grown as spring flowering pot plants. By using the easy-to-follow directions below there is no trick at all in producing excellent specimens:

1. Use only cuttings taken from lighted stock plants.
2. For flowering about May 1, place 5 rooted cuttings in a 5- or 6-inch pot February 8 and pinch that same day.
3. Give the plants 10 foot-candles of light from 5 p.m. to 10 p.m. each night from February 8 to March 8.
4. On March 8 pinch the plants again, discontinue lighting, and to produce the most uniform specimens shade with black cloth daily from 5 p.m. to 8 a.m. until flowering.
5. Keep the night temperature at 60° F. from potting until flowering.

If the plants are desired somewhat earlier or later than May 1, the dates of potting, pinching, lighting, and shading can be moved ahead or back as desired. This schedule has been worked out at Columbus, Ohio, which is on the 40th parallel. For other localities some modifications may be necessary.

In Ohio the sale of the chrysanthemum as a hardy plant necessitates the purchase of a license for the sale of perennials. Consult with your nursery inspector or county agent if you are not sure of the law in your state.

As a spring flowering pot plant the hardy or garden chrysanthemum is in a class by itself and when correctly grown it should be a valuable addition to the list of spring plants sold by both nurserymen and florists.

The following varieties are recommended:

White	Yellow	Pink	Bronze
Avalanche	Bamboo	Joybringer	Carmelita
Calcite	Carnival	Major Cushion	Early Bronze
Christopher Columbus	Early Gold	September Cheer	James Stewart
Classic	Early Yellow	Serenade	Mona
Pepita	Gold Rush		
Renown	Lemonade	Apricot	Orchid
Silverplate	September Sunshine	Calico	Jewell
White Wonder	Witchery	Tiffany Rose	Spellbound
	Yellow Christopher Columbus	W. P. Snyder	
	Yellow Spoon		
	Yellow Supreme

\*For a pinched crop, pinch on this date and plant as indicated below:—

When planting Nov. 15 to Feb. 14, allow 5 weeks from planting to pinching.

When planting Feb. 15 to May 14, allow 4 weeks from planting to pinching.

When planting May 15 to Aug. 14, allow 3 weeks from planting to pinching.

When planting Aug. 15 to Nov. 14, allow 4 weeks from planting to pinching.

\*\*No need to use black cloth between September 1 and February 15 unless lights are used in the same house.

## DESCRIPTIONS OF NEW 1954 INTRODUCTIONS

**MARSHMALLOW** Oct. 5. Heavily petalled pure white daisy. Improves the growth and durability of Chris. Columbus. Recommended as a garden variety and Mother's Day pot plant. Dwarf, compact plant.

**SILVERTONE** Oct. 24. Intermediate white daisy. Similar in habit to Reward and Buckskin. August and September cloth house and May through October in the greenhouse.

**SILVER CLOUD** Nov. 1. Intermediate white single. Heavily petalled, better form than Halo. A good producer. Recommended April through October with use restricted to the greenhouse.

**FREEDOM** Nov. 5. Intermediate pure white single. Outstanding for spray formation and flower substance. Clean vigorous growth; improves Halo in all respects. Recommended for August and September cloth house, and May through November in the greenhouse. Excellent shipping and keeping qualities.

**WHITETOP** Nov. 5. Intermediate pure white decorative. Vigorous growth habit. Recommended April through November in the greenhouse and August through October in the cloth house; also as a medium sized disbud for pots. It fills the need for a pure white pompon in the greenhouse during the spring months when Encore is difficult to flower.

**PACESETTER** Nov. 10. Intermediate pure white single. Good form, petallage and substance. Excellent shipping quality. Growth is short and strong. Excellent for spring, summer and fall. A very fine pot plant disbud.

**ILLINI STARLET** Dec. 10. (Univ. of Ill.) Intermediate white anemone. Improves Garza in form, growth and clarity of color. Good production and much freer growth. Believe this is a white anemone that could replace Garza.

**TRENTON** Dec. 15. (DePetris) White pompon. Good form and substance plus production. An important pompon for natural flowering.

**TALMEDA** Jan. 5. (DePetris) Intermediate white pompon. Improves Revelation. Just about latest white pompon. Good form and substance.

**LEE POWELL** Oct. 10. Large golden yellow decorative. Vigorous plant. Showy. Fine for disbudding. Outstanding garden variety. Promising for outdoor cut flower and spring pot plant.

**ARLORA** Oct. 15. (DePetris) Large, soft yellow, closely incurved flower. Very good substance; Flower 3"—3½" in diameter. Should prove good spring and fall pot plant.

**CREAMPUFF** Oct. 20. Intermediate cream white single. Strong fast growth and very heavy production. A beautiful new color for April through June. Excellent in the late September and October cloth house.

**ORDALIA** Oct. 25. (DePetris) Deep golden yellow, semi-incurved decorative. Size 3"—3½". Excellent keeper. Very vigorous bushy growth. Blooms in the garden in October. A large pot plant disbud.

**STARLIGHT** Oct. 25. Large yellow daisy. Improves the growth and production of Starbright. Very durable; uniform response. A 9 week Yellow Valencia. Recommended April through October in the greenhouse. Natural or disspray. Makes a fine disbud in pots spring and fall.

**AZTEC** Oct. 28. Intermediate deep yellow daisy. Strong wiry growth and heavy production. Especially valuable for high temperature flowering. Recommended May through October in greenhouse and, August and September in cloth house. Greatly improves existing 9-week yellow daisy varieties in production and flower quality.

**SAUTERNE** Oct. 30. Intermediate intense yellow single. Very uniform response tolerating a wide temperature range. Improves the production, petallage and quality of Yellow Halo and other existing yellow daisy varieties. Recommended May through October in the greenhouse, August through October in the cloth house.

**GONDOLA** Oct. 30. Intermediate yellow daisy. Outstanding form and color. Quite large flower similar to Starbright. Recommended May through October in the greenhouse and in the cloth house. Very durable with fine petallage and substance.

**HONEYMOON** Nov. 4. Large yellow daisy. Good form and an unusually clear yellow color. Recommended May and June in the greenhouse, and August and September in the cloth house.

**YELLOW PARAMOUNT** Nov. 23. Deep yellow sport from Paramount. Same habit as original variety.

**YELLOW FORTUNE** Dec. 1. Deep yellow sport from Fortune. Same habit as original variety.

**YELLOW SNOWCAP** Dec. 15. Deep lemon yellow sport from Snowcap. Same habit as original variety.

**BUCKEYE** Oct. 3. Intermediate salmon bronze pompon. Dwarf, compact, very sturdy growth. Striking new color well suited to the garden and Mother's Day pot plant program.

**MOONMAID** Oct. 14. Intermediate salmon bronze pompon. A new and useful color with good growth and production. Late garden variety or outdoor cut flower. Recommended for spring and fall flowering.

**TALISMAN** Oct. 20. Talisman bronze; intermediate daisy. Color holds exceptionally well. Recommended April through October in the greenhouse and August and September cloth house.

**PARADISE** Oct. 20. Intermediate coral red single. Color holds well. Recommended April through mid June in the greenhouse, mid August through October in the cloth house. A tall variety of outstanding new color.

**PALETTE** Oct. 20. Intermediate dark salmon single. Heavy petallage with good substance. Fine in spring and fall. A new pastel shade.

**GAIETY** Oct. 25. Intermediate coral bronze single. This variety in combination with Paradise and Prelude constitute a trio bred to widen color range adding new and lively pastels especially valuable in the spring. Good growth and production. An exciting new color.

**HILARITY** Nov. 1. Intermediate golden bronze single. Small daisy of wide petal and very lively color. Tolerates a wide range of conditions. Recommended May through October. Growth habit lends itself to pot culture.

**FLAME GLOW** Nov. 5. (Winkler) Intermediate golden orange single. Fine growth and production.

**ORANGE BEAUREGARD** Nov. 5. Lively, light orange or golden bronze sport from Beauregard. Valuable in a continuous year round program. In the early cloth house or under high temperature conditions it is a deep golden yellow pompon. Growth habit and response is same as that of Beauregard.

**RED KING** Nov. 13. (Poesch) Intermediate Red Daisy. Good growth and production; short, compact plant with compound spray. A good red pot plant variety.

**CADET** Nov. 14. Intermediate red anemone. Short, compact and free breaking. Approximate size of Gypsy. Recommended as a spray but useful as a disbud. Season is October through March, especially effective at Thanksgiving and Christmas. A pot plant variety.

**ILLINI REDWOOD** Nov. 25. (Univ. of Ill.) Intermediate red pompon. Hard, durable, well formed flower. Fine red pompon for Thanksgiving.

**PETRISIAN MAUVE, PETRISIAN PINK, PETRISIAN ROSE** Oct. 5. (DePetris) These are three outstanding DePetris hybrids for the garden and spring pot plants.

**SONNET** Oct. 14. Intermediate salmon pink pompon. Stocky compact growth; well adapted to the garden and a good spring pot plant. Valuable color in late September cloth house.

**BETTY** Oct. 14. Intermediate light salmon pink decorative. Upright cut flower growth; suitable for gardens. Well known for outstanding color.

**FAIRYLAND** Oct. 15. Intermediate decorative; lively pink color. Very uniform response. A low temperature variety that improves Carolyn Yosick; also a spring and fall pot plant. Recommended in early cloth house and as a garden variety.

**MAYFAIR** Oct. 15. Intermediate, smooth pink single. Growth and production surpasses that of Reward. Uniform flowering response. Valuable for cut April through October in the greenhouse and, July through October in the cloth house. A much needed color in a cloth house daisy.

**JESTER** Oct. 15. Intermediate, dark, orchid pink single. Very early variety with free vigorous growth.

## DESCRIPTIONS OF NEW 1953-54 INTRODUCTIONS

**CITATION** Oct. 15. Intermediate pink pompon. Dwarf, compact but very sturdy growth. In color and growth it improves Queen of Pinks. A pot plant disbud. Recommended April through June and again in October. One of the best late garden varieties.

**MIRTH** Oct. 20. Intermediate light pink single. Larger than Reward. Especially valuable in spring flowering April through June. Durable and uniform response in July through October in the cloth house.

**PRELUDE** Oct. 24. Intermediate coral pink single. Clean growth habit. A beautiful pastel color, extremely effective under artificial light. Recommended flowering period April through June, and mid September through October cloth house and greenhouse.

**PINKETTE** Oct. 25. Intermediate pink pompon. A bread and butter variety to grow with Keepsake and Gold Coast. Recommended for May and June, and again in September and October in the greenhouse; also August through October in the cloth house.

**VOGUE** Oct. 25. Large pink single. Beautiful form and substance. Especially valuable June and July. Rigid growth habit. Improves Ballerina and Soprano. Good in August—September cloth house.

**PORTRAIT** Nov. 8. Large pink pompon. Very heavy producer of beautiful high quality flowers. Growth is strong, compact with excellent sprays. A versatile variety that can be grown anytime 10-week varieties are used. Also responds well to partial disbudding. Tolerates a

lower minimum temperature than Pandora. Excellent pot plant March through December.

**BLUE CHIP** Nov. 1. Intermediate pink decorative. Vigorous growth and heavy production; very pleasing color. Recommended May and June in the greenhouse, and August through October in the cloth house. Also a good spring pot plant disbud.

**LOTUS** Nov. 3. (DePetris) Intermediate pink pompon. Mary McArthur growth; a high quality flower for the shading program.

**TEMPO** Nov. 3. Intermediate deep pink decorative. A 9-week Masterpiece. Rigid stem; very hard, durable flower. Recommended April through June in the greenhouse, and August and September in the cloth house.

**PENNANT** Nov. 10. Intermediate pink decorative. A dark pink Masterpiece; fine form and substance. Tolerates low temperature well. Vigorous growth. Recommended April through October in the greenhouse, and August through October in the cloth house.

**COVER GIRL** Nov. 10. (Winkler) Light pink anemone with salmon pink cushion. Good color and form. Short, compact growth with good production. For cut flower and pot plant use.

**NOBILITY** Nov. 10. Intermediate light pink single. Very flat form. Medium to tall with free, easy growth. A quality daisy. Recommended May, June, October and November in the greenhouse, and August through October in cloth house.

**CAROLE** Nov. 15. (Winkler) Light pink anemone with salmon pink cushion. Resembles Majorette. Definitely smoother color plus more substance.

**POLKA** Nov. 20. Intermediate pink anemone. Essentially a pot plant; equally valuable as a spray or disbud. Beautiful form and color. Compact growth. Recommended October through June.

**NUGANO** Nov. 20. (DePetris) Intermediate pompon. Excellent growth and production. A high quality flower. One of the most important pink pompon for this season.

**DK. PK. MAJORETTE** Nov. 20. Dark sport of Majorette. Lively, intense color. Same habit as original variety.

**ILLINI FORMAL** Nov. 23. (Univ. of Ill.) Intermediate rose pink pompon. Fine growth and production. Excellent substance. Flowers for Thanksgiving. Very novel form that should be popular.

**PINK CLOUD** Nov. 25. (Winkler) Light pink decorative. Greenish overcast until mature; very fine form and substance.

**ARGYLE** Dec. 10. (DePetris) Small pink pompon. Fine clean growth; hard flower plus very acceptable pink shade. An outstanding late pink pompon.

**DK. YEL. CHATTANOOGA** Nov. 25. (Wolfe) Deep yellow sport from Chattanooga. Same habit as original variety.

**WHITE ENCHANTRESS** Dec. 5. Sport of Enchantress.

**YELLOW ACCLAIM** Dec. 5. Bright yellow sport of Acclaim.

## NEW GARDEN VARIETIES 1954

**OSTOSA** Solid pure white medium large pompon type. Vigorous semi-dwarf habit. Very free flowering with good substance. Blooms Sept. 25th.

**BUTTERCUP (H)** Large golden yellow incurving bloom. Free growth and good foliage as well as free flowering. Blooms Oct. 1st.

**REGINA** Large decorative blooms of a pleasing coral apricot bronze color. Very free flowering. Blooms Oct. 1st.

**LIMELIGHT** Very free and productive solid white pompon with a greenish cast. Excellent substance and form as well as placement. Good clean straight stems makes it an excellent cutting variety. Beautiful growth and foliage. Blooms Oct. 5th. This variety should be outstanding for cutting besides making a

very showy white pompon for the garden, very vigorous and easily grown.

**CORONA (H)** An outstanding vivid pink daisy shading to wine. Of good size and excellent substance. Very good clean stem freely produced and perfect placement. Very good growth and foliage. Blooms Oct. 5th. Excellent both for cutting and garden decoration.

**SUNSTONE** Very free and vigorous plant producing many blooms of soft yellow spoon or spider like blooms on good stems. Very good foliage. Somewhat tall growth habit. Useful for cutting as well as garden decoration. Blooms Oct. 8th.

**CALUMET (H)** Outstanding full decorative blooms of good size and substance produced on strong clean stems of good length. Color is a lively apricot with a

luminous glow. Beautiful foliage with very free and vigorous growth habit. Blooms October 8th to 10th. This is a Rubellum hybrid which produces high quality blooms with almost perfect stems and sprays without shading.

**CHOPIN** Large incurved light bronze averaging 4" to 4½" which grows 20 or more blooms to the plant. Very strong stems and vigorous semi-dwarf growth. Blooms October 15th.

**SARASOTA** Lively yellow solid pompon with good size and substance. Vigorous and productive, therefore suitable for cut flowers. Medium tall. Blooms October 15th.

**ARVIS** Vivid bronze small pompon. Free growth and good stem. Blooms October 15th.

### DISCLAIMER

Mum cuttings when shipped by our specialist growers, are in perfect healthy condition and we cannot accept responsibility for any damage due to heating, freezing, delay, or damage in transit. Any damage due to such causes, should be reported immediately to the transportation carrier and an inspection asked for and claim made to them. Our responsibility ceases when transportation company accepts and signs for shipment. Furthermore, we accept no responsibility for growing failures.

This Table Indicates Prices For 50 or More Than 50 of a Variety, On One Order.

Price Classification	Per 50	100-250	300-450	Per 100	500-950	1000-2450	2500 up

## COMPLETE BUILDING INSTRUCTIONS FOR CLOTH HOUSES

Measure out a PERFECT RECTANGLE on the ground, each side of the rectangle being 33 feet if you plan a house 33 feet in width, or if larger, some multiple of 33 feet. Posts to be placed in the ground three feet deep, to carry the wires at positions that will line the wires in 16-feet-6-inch centers, in every direction.

If you plan a 33 feet wide house, it will require no inside posts; in a 66 feet width house you will need one row of posts inside, and in a 99 feet width house two rows of posts inside. IN ALL SIZE HOUSES BE CAREFUL THAT THE POSTS ARE PLACED TO CENTER THE SUPPORT WIRES EXACTLY 16 FEET 6 INCHES, so the top cloth made 33 feet widths with allowances will fit the frame.

Each outside post must be anchored rigidly with a dead man, and each corner post must have two dead men, one anchored against each side of the rectangle, dig a hole about three feet deep, six feet away from the post, take a 24-foot length of No. 8 galvanized wire, double it and loop one end around the post 6 feet 6 inches from the ground, attach the other end to the dead man and bury it, then twist the wire with a stick as in sketch until the post is in line; nail the 6-inch baseboard in position around the outside of the house. Place two 1½-inch staples six feet above the ground on each post so the No. 8 galvanized wires will pull through easily and use wire stretchers to stretch the wires taut. Stretch the wires from the corner posts only, as corner posts have two dead men, one anchored against each side of the rectangle, stretch the wires until they have the proper rigid tension and then drive the staples in fully to hold wires.

If you have inside posts they may be placed to hold the support wires and cloth 6¾ to 7 feet in height, giving more head room with the same width of cloth.

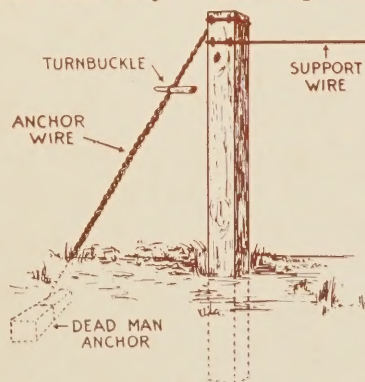

The cloth is rolled and folded and

will be easy to lay if care is taken to follow directions.

To cover the top unroll the cloth at one end of the frame and with several men lift it across the support wires, leaving about a yard hanging over the end wires so you can adjust it later; unfold a few yards lengthwise beside the frame, then take the selvage edge of the house top and the selvage edge of the sidewall and roll them together five times around the side wire, where you have surplus cloth on the ends wrap this around the wires and sew it, as it protects the cloth where the strain centers on the support wires. Pin the cloth in place with 8-penny wire nails, pin 10 or 15 feet before you begin to sew, stretch the cloth only enough to keep the sagging out and be sure to keep the lengthwise reinforcement woven lines at an even distance parallel with the length of the wire.

Start at the post and sew by whipping around the wire, using a tight lock stitch, so that the cloth will not slip; do not whip the thread along the wire more than 3 inches before lock stitching again. As you sew have the cloth pinned ahead of you 10 to 15 feet all the time. After this side is finished unfold the cloth to the other 33 feet side support wire and pin before sewing, making sure that the woven reinforced lines are at an even parallel distance from the support wire; sew ends with the same method. Only sew the cloth to support wires. Fasten the sidewalls to the baseboard with the new aluminum fasteners every 9 inches instead of using the old lath strip method, as this will prevent the cloth from rotting at the baseboard, from dampness.

A very good idea to prevent the cloth from chafing and wearing out the yarns is to cover the rough joints of the baseboard and also wrap the posts with either heavy paper or old cloth. Where wires are spliced cover them with some kind of wrapping.

## A.B.C. — Headquarters for PLANT BANDS OF ALL TYPES

*"Easi-Off"*

### WOOD PLANT BANDS

CAT.	Size in inches	Weight per 1000	Per 1000
No. M-310	1-3/4 x 1 3/4 x 2 1/2	18 lbs.	\$4.10
No. M-320	2 x 2 x 2 1/2	20 lbs.	4.50

## CLOTH FOR SHADING AND CLOTH HOUSES

### AMERICAN BLACK SHEEN SHADING CLOTH

For shading early chrysanthemums during the normal summer growing season in greenhouses, cloth houses, or outside, as it will bring your blooms in on schedule. Ideal for outdoor shading as it will allow the rain to penetrate and not lie in pools on top. Guaranteed fast black, closely woven, treated and pre-shrunk to produce 99% darkness.

Available in bolts approx. 36 inches wide or cut to any length. It can be sewn to any width in multiples of 36 in.

PRICES PER SQ. YD.	Unsewed	Sewed
100 sq. yds. or more	\$ .59	\$ .65
50-99 sq. yds.	.64	.70
20-49 sq. yds.	.69	.75
Less than 20 sq. yds. MINIMUM CHARGE	15.00	15.00

### KNIGHT BLACK SHEEN SHADING CLOTH

A heavier cloth designed for indoor shading on a year-round program as it cuts out 100% of all light. Recommended especially by universities and experimental stations for off-season growing where total exclusion of light is essential. Otherwise same as American Black Sheen listed above.

PRICES PER SQ. YD.	Unsewed	Sewed
100 sq. yds. or more	\$ .65 1/2	.71 1/2
50-99 sq. yds.	.70 1/2	.76 1/2
20-49 sq. yds.	.75 1/2	.81 1/2
Less than 20 sq. yds. MINIMUM CHARGE	16.50	16.50

### LONG LIFE SARAN CLOTH HOUSE

SARAN, the new material for cloth houses, is fast making the old cotton cloths obsolete. SARAN is a plastic screening made by Dow Chemical Co. and will outlast copper screening, giving 10 years service. Non-inflammable and impervious to water. Air circulates freely through its fine mesh with 68% light filtration.

Based on a made up cost of 46 1/2c per square yard, a SARAN Cloth House will cost you approximately 5 1/2c per square yard per year; this means SARAN is the lowest cost cloth house on the market today.

#### PRICES F.O.B. NEW JERSEY

33' x 33'	\$113.93	66' x 132'	\$610.55
33' x 66'	188.79	66' x 165'	752.37

66' x 99'	480.81		

### A. F. S. SPECIAL HEAVY PLASTIC STERILIZING CLOTH

After years of experimenting we have found a heavy plastic material that makes the best sterilizing blanket so far. Strong (heavy 12 gauge), yet flexible.

Makes a tight joint at bench edges. Light (15 oz. a sq. yd.) and easy to handle. Transparent.

Available in any length or width, but pieces 6 ft. or 8 ft. wide are the most popular. Price, F.O.B. Philadelphia, Per sq. yd. .... \$2.25
